Temporary suspension of the calibration service – black body calibration

Dear customers,

due to a failure of one of the standard thermometers used during calibration, calibration of some blackbodies in CMI is temporarily suspended. The restriction applies mainly to flat plate black bodies up to 500 °C. Before sending the black body to the laboratory for calibration, please always contact the laboratory staff (Ing. Lenka Kňazovická, Ph.D. (lknazovicka@cmi.cz) or Ing. Martina Rudolfová (mrudolfova@cmi.cz)) to find out the current situation and find suitable solution.

Full restoration of calibration services is estimated in **June 2023** instead of January 2023, due to delayed delivery of the new standard.

Thank you for your understanding and we apologize for any complications.

With best regards

Ing. Lenka Kňazovická, Ph.D.

Keeper of the national standard for radiation thermometry
